

November 27, 2017

**Delaware Tech
Corporate Training Center
Dover, Delaware**

Delaware Resilient and Sustainable Communities Summit

**Lessons of the 2017 Hurricanes:
*Learning from the past to prepare our
communities for the future***

This conference invites participants from across all levels of government, including local community leaders and municipal officials as well as community supporting non-profit organizations, contractors and consultants, academia, and planners.

The day will feature plenary and panel sessions with local experts that address the community-building aspects of resiliency as well as opportunities to network with subject matter experts and planning practitioners.

2017 hurricanes Harvey, Irma, and Maria inflicted devastating impacts on communities across the U.S. The sobering headlines coming from the affected regions raise questions as to what Delaware is prepared for, and what we can do with this new insight now in order to prepare for these types of natural hazards and more in the future. Coastal storms and climate change present great threats, but also great opportunities to plan and prepare, and to build resilient, livable, and sustainable communities.

Registration Opens October 10th, more information is available here:
